

Attenda

Always On Managed Services

Reed Online case study

reed.co.uk expands its online business and increases revenue with a new web environment providing additional recruitment services

reed.co.uk wanted to look for innovative new ways to improve its web services and maintain competitive advantage. The goal was to increase brand awareness and customer loyalty by providing the best user experience on its website. It collaborated with Attenda to plan a new web environment based on Microsoft technologies to support these new business initiatives.

Established in 1995, today, reed.co.uk is the UK's most visited recruitment site, with more than 3 million job seekers visiting the site each month.

Access to reed.co.uk is free for jobseekers, but the company wanted to upgrade its online environment to broaden its range of online services and start to offer advanced recruitment tools such as candidate search for its business to business clients.

The company wanted to enhance its web environment to support an increasing customer base, so its biggest challenge was to expand its range of services whilst providing visitors with a consistently high-quality user experience.

certainty / confidence / agility

Implementing the Attenda solution

reed.co.uk had originally selected Attenda in 2003 to manage its website migration project, with upgrade of the site to run on Windows .NET platform and the replacement of old hardware, including a thorough security audit on the new website application and infrastructure. It had chosen Attenda for its 24 x 7 application operational support capability and strong focus on and depth and breadth of skills in Microsoft technologies, as a Microsoft Gold Certified Partner. In December 2006, when the hosting contract came to the end of its lifecycle, reed.co.uk saw it as an opportunity to upgrade the online environment.

The requirements for the new web environment included high availability for a consistent experience, lower total cost of ownership by improving efficiency and reducing server footprint and improved performance to allow for growth.

In March 2007, reed.co.uk collaborated with Attenda to develop a new hosted web environment based on Windows Server 2008.

As Mark Ridley, Technology Director, reed.co.uk explains, "We had examined beta versions of Windows Server 2008 and were convinced that it demonstrated the reliability, flexibility and security that we required in a web server."

Working closely with the in-house architecture specialists, Attenda designed a more powerful and more efficient solution without increasing the number of servers. The Windows Server 2008 solution provides a secure environment for developing and hosting services over the web. The solution was deployed in October 2007 for a test migration, to test performance with sudden increases in web traffic, to increase confidence in the Attenda Windows Server hosted solution.

Ridley adds, "The solution is a very elegant design, we did not have to increase the number of hosted servers, but have significantly improved our capacity, with every piece of our architecture individually optimised."

In 2010, the current platform was refreshed, to reduce the cost profile, to increase the utilisation of Attenda's Cloud computing platform, Attenda RTI, and to optimise performance. The new solution embraces Attenda RTI scalability, with the ability to increase computing resources on demand, provisioning of an automatic disaster recovery capability and NAS replication.

Realising the business benefits

The reed.co.uk hosted and fully managed Windows Server environment enables the internal IT team to develop and deploy new business services quickly, with Attenda using enhanced health and diagnostic tools to monitor the site's availability and performance.

Ridley confirms, "Since the early days back in 2003, we have experienced a continuous improvement in our relationship with Attenda, working with their experts so that we can consider how best to manage our application as we continue to develop it."

The solution has increased scalability, allowing reed.co.uk to easily expand its range of services and reduce the time and complexity of server management, and with reduced number of servers. The hosted environment continues to support an increase in online visitors, with the capability to scale on demand.

For reed.co.uk, the Attenda managed service delivers innovation, leveraging the investments in firewalls and storage within Attenda's shared operations platform, Attenda M.O., combined with the scalability and reliability of a proven service, delivered to a business-led service level agreement.

Ridley concludes, "Attenda understands our business and is willing to take on a degree of risk that gives us additional confidence in their commitment. They are always receptive to new ideas and were ahead of their time in offering us an SLA based upon application availability back in 2003."

"Attenda understands our business and is willing to take on a degree of risk that gives us additional confidence in their commitment."
